

SCHWEIZER SERVICE LETTER

SUBJECT: NEW SA-269K-101 FUEL SYSTEM VENT KITS

MODELS AFFECTED: Models 269A, 269B, 269C and 269C-1 Helicopters registered in the United Kingdom.

COMPLIANCE: September 06, 2000

Schweizer Aircraft has designed the SA-269K-101 fuel tank vent system kit that complies with the new United Kingdom CAA AD 002-02-2000 "Fuel Vent Modification" requirement for minimizing fuel spillage through the vent in the event of an aircraft rollover. This vent system contains a fitting with a check ball, which closes the vent in the event the helicopter is rolled on its side. The kit comes in four different configurations depending on the type of fuel system installed.

- SA-269K-101-01 25 gallon single tank with angled vent.
- SA-269K-101-03 25, 30, and 35 gallon single tank with vertical vent.
- SA-269K-101-05 49 gallon system (30 and 19 gallon tanks).
- SA-269K-101-07 65 gallon system (35 and 30 gallon tanks).
